

Civil/Environmental Engineer - Waste Management - (BIA000341)

As an Environmental Engineer or Planner for waste management in Albuquerque, you will have the chance to deliver waste management projects to include providing task management, project planning, project engineering and design and permitting throughout the western US regional market, primarily focused in the southwestern United States.

Working with other members of our team you will plan, design, and provide construction management support for municipal and industrial waste management facility projects (landfills, transfer stations, composting projects, and other organic waste conversion technologies) encompassing multiple disciplines. During your time with us, you will also network with and participate in appropriate industry professional organizations and applicable regulatory agencies. If you're up for the challenge, we've been looking for someone just like you. Join our team and help us lay the foundation for human progress.

Qualifications

- BS or MS degree in an engineering, planning or relevant discipline, preferably civil or environmental engineering
- Minimum of 5 years of experience in environmental and waste management (including work on solid waste, engineering and/or planning, and/or organic waste projects)

The ideal candidate will possess the following skills and experience:

- 5-10 years of experience with environmental and waste management projects
- Strong leadership and communication skills
- Professional Registration in Civil or Environmental Engineering
